

TOWN OF LUNENBURG

RFP TOL20242022

PELHAM ST RECONSTRUCTION

ADDENDUM #2 – AUGUST 26, 2024

1. The tender documents indicate a hand delivered copy of our submission and an emailed copy is required. This is atypical, usually it's one or the other. Can we submit our tender visa email only?

Answer: Yes, we will accept emailed PDF copy to purchasing@townoflunenburg.ca . Both submission is not required.

2. The curb detail on drawing C-001 shows what looks like two runs of rebar. It is hard to tell as these aren't labeled. This would be atypical for new curb and would be difficult to place as the new curb for this phase is all curved. Please confirm if these are runs of rebar? If so, please confirm if they are required? If they are required please indicate the size of the new rebar?

Answer: Rebar in curb detail can be omitted.

3. Note 1 on drawing C-103 seems to indicate there may be some storm services within this phase of reconstruction that may need to be reconnected to the new storm or new sanitary. No pay item was provided for these services and no information regarding these services was provided. Please confirm reconnection of storm services is not part of this tender and if required will be extra to the contract?

Answer:

Only the sanitary sewer has connections to existing which are captured in item 25 in the Schedule of Quantities and Unit Prices. The new storm system is to be a standalone, isolated system. There is to be a temporary connection to the new sanitary MH in the intersection with a new outfall to be capped for future use once the downstream combined system is separated. All invert elevations are listed so there should be no additional price required and this should just be accounted for under the sanitary manhole line item.
