

TOWN OF LUNENBURG

RFP TOL20242026

Stormwater Separation Master Plan

ADDENDUM #4 – October 18<sup>th</sup>, 2024

Q: Based on requirement for Phase 2 in section 2.4, it is anticipated that flow monitoring will be required to Calibrate the system. In order to assist in the assessment consistent bids, can the Town specify how much flow monitoring is requested for model calibration?

A: The Proponent shall decide on the level or quantity of flow monitoring required to support their model calibration, and detail this within their Proposal.

Q: Phase 1 in section 2.4 states that “Field data collection of topographical information (such as publicly available LIDAR elevation data) to analyse catchment areas, flows, volumes, etc.”. Please confirm that topographic survey is required, and how much field inspection is anticipated.

A: The Proponent shall decide what to allow for adequate field inspection. The Town has identified LIDAR as a potential source, but for specific areas where this is not suitable or conditions need further field verification, this will be up to the Proponent to resource.
